A Kenyan scientist won this year's Royal Society Pfizer Award for his research on childhood malaria.

- Dr. Collins Ouma received nearly \$1 million to study how the immune system responds to malarial anemia. The research has the potential to save hundreds of thousands of lives each year in Sub-Saharan Africa.
- Upon presenting the award to Dr. Ouma in December 2010, the Royal Society said, "The work that African scientists do is hugely important in helping to relieve suffering on the continent...It is also very exciting that the prize will enable him to pass his expertise on and encourage other young African scientists."
- A portion of this funding will be used to establish a teaching and research laboratory at Maseno University in Kenya.
